

Week 6 SSRS Interactive Reports – Reflection

Name: Kathy Yost

Interactive SSRS reports help executives quickly analyze data at multiple levels without overwhelming detail. The drill-down feature provides a clear summary that expands only when needed, while the parameterized report allows focused analysis by time period. These tools improve decision-making speed and reduce report clutter. However, too many interactive layers or filters can confuse users, so I limited the options to the two most practical views—category and date range.
